DETAILED ACTION

1. Claims 29-37 and 39-44 remain for examination. The correspondence filed 8/19/05 amended claims 39-44.

Response to Arguments

2. Applicant's arguments, see the amendment filed 8/19/05, with respect to the Spaur reference have been fully considered and are persuasive. The rejection of claims 29-37 and 39-44 has been withdrawn.

Claim Rejections - 35 USC § 101

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

4. Claims 29-37 and 39-44 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. By way of example, Claim 41 recites "a group of first modules connected to said digital serial communication connection at different locations (A) for controlling equipment at each location (A); a second module connected to said digital serial communication connection at a location (B), spaced from said locations (A), including a radio communication means and means for generating an activation message in the complete CAN message format in response to a received message which has a partial CAN message format retaining substantially all of the CAN message format for signaling one of said first modules over said digital serial connection; and a portable control unit having a radio communication means for

Art Unit: 2135

establishing a radio communication link with said second module, and for generating commands for activating said equipment at each of said locations (A), said portable control unit having an interface for generating a partial CAN message representing said command and having a substantially CAN message format, and transferring said partial CAN message via said communication link to said second module which generates said complete CAN message from said partial CAN message and forwards said CAN message via said serial communication connection to said first group of modules permitting the response to said commands to be observed at each of said locations (A)."

The steps do not perform the requested action. Thus, claim 41 does not recite any structure, i.e. there is no recitation of a machine to carry out the functions of all the recited steps. Therefore, claim 41 recites non-statutory subject matter. Independent Claims 42-44 recite similar limitations lacking structure, and are similarly rejected. Claims 29-37 and 39-40 are rejected by virtue of their dependency on claim 41.

Allowable Subject Matter

5. Claims 29-37 and 39-44 would be allowable if rewritten to overcome the 101 rejections above.

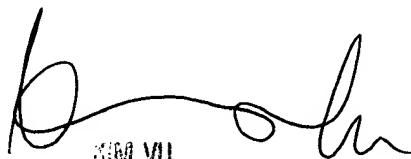

Conclusion
